Atlanta, Georgia & Remote • Résumé current as of October 1, 2020

## Skills

---

*Software Engineer with 12 years of experience building and deploying Python web applications  
and 20 years total in web technology*

### Systems Administration

Linux, K8s, Docker, AWS, GCP, TravisCI, CircleCI, GitLabCI

### Development

Python, Django, SQL, Bash, HTML/CSS/Javascript

### Collaboration

IRC/Slack, Git & GitHub, Sphinx, Bugzilla

## Employment

---

### Mozilla, *Staff Backend Software Engineer* ..... 08/2019 - present

Helped our small team develop new CI pipelines using GitLabCI and task runners in our own AWS infrastructure. These runners build our Docker images, update k8s deployments, and run unit and integration tests.

Implemented a new l10n system for [www.mozilla.org](http://www.mozilla.org) ([www.m.o](http://www.m.o)) for over 100 languages, moving the site from custom .lang file format to Fluent files to support the l10n systems and teams in use around Mozilla.

### Mozilla, *Senior Web Developer* ..... 10/2013 - 08/2019

Worked as technical lead for the [www.m.o](http://www.m.o) and [basket.m.o](http://basket.m.o) projects for backend development.

Moved [www.m.o](http://www.m.o) to a hybrid-static site still using Django but relying on pre-built read-only SQLite files for data distribution.

Helped move our infra from Deis to pure kubernetes (k8s) by doing a lot of work on the apps and deployment scripts, as well as developing and releasing [django-allow-cidr](https://github.com/mozilla/django-allow-cidr).

Moved [www.m.o](http://www.m.o) assets pipeline from [django-pipeline](https://github.com/mozilla/django-pipeline) to Gulp using separate Docker images for each and browser-sync to serve the assets and proxy the Django app.

Lead the technical work for [webwewant.m.o](http://webwewant.m.o), an application that geolocated IPs and showed downloads of Firefox 29 on a map.

Built the publishing system for Mozilla Foundation Security Advisories for use by the security team that takes Markdown or YAML files in a repo and turns them into the [/security/](https://www.mozilla.org/en-US/security/) section of [www.m.o](http://www.m.o).

Developed an administration platform and data exchange system for Firefox release notes management.

Developed the standard for [contribute.json](https://github.com/mozilla/contribute.json) files in repos and on websites.

### Mozilla, *Web Developer* ..... 01/2012 - 10/2013

Worked with various teams to improve and maintain web applications including [mozillians.org](http://mozillians.org), [mozillalabs.com](http://mozillalabs.com), and [developer.m.o](http://developer.m.o).

Worked on the transition of [www.m.o](http://www.m.o) from PHP to a Python/Django application.

Worked on [basket.m.o](http://basket.m.o) to add support for the SMS api from ExactTarget.

Developed and deployed [scrumbugs](https://github.com/mozilla/scrumbugs), a site that gathered Scrum data from bugs in [bugzilla.m.o](https://bugzilla.mozilla.org) and graphed it for teams in need of that sort of thing.

### MetaMetrics Inc., *Software Engineer* ..... 01/2010 - 12/2011

Developed web applications around the company's core educational measurement technologies.

Worked on a team to develop and launch [engagingenglish.com](http://engagingenglish.com), a site that aggregates content from across the internet, measures it for text complexity, and recommends it to users based on their reading skill level and interests.

Developed internal web-based tools to increase efficiency and decrease errors for other teams.

All development work was done with Python and Django, using many 3rd party libraries including South and Haystack (in front of Solr), and using MySQL or PostgreSQL for persistence depending on the project.

- Intuit, *Software Engineer*** ..... 2007 - 2009  
 Helped design and build a master configuration management system for all Digital Insight products. The system manages configuration files, databases, and product files across multiple network tiers and server architectures. All of the web-based interfaces were built with Python/Django using jQuery for client side JS.  
 Wrote and maintained a variety of CLI and web-based tools to help our web and technical support teams do their jobs more efficiently. These were built using a variety of technologies including Python, Django, Perl, PHP, and MySQL, and deployed to Debian GNU/Linux and AIX.
- Digital Insight, *Senior Web Developer*** ..... 2005 - 2007  
 Helped both build, and manage the building of websites on a variety of platforms from flat files on a Unix server, to XML/XSLT based sites running on Apache Cocoon. I pioneered the effort to use jQuery as our standard JS library, and wrote several jQuery plugins to aid our development process. As Sr. Developer, I was also responsible for maintaining the quality and quantity of the work of the entire team. I also installed, configured, and maintained the two Ubuntu development servers the team used to host our sites in development as well as the tools we developed to aid in site development.
- SmallBizPros Inc., *IT Specialist*** ..... 2004 - 2005  
 Developed accounting and server management software using Perl, PHP, and PowerBuilder.  
 Installed and managed the Linux server infrastructure for the company providing web and email services.
- Digital Insight, *Web Author*** ..... 2002 - 2004  
 Built marketing websites for banks and credit unions using just HTML, Javascript, and CSS.
- Northeast Georgia Internet Access, *Support Engineer and Web Developer*** ... 2000 - 2001  
 Provided phone and in-person technical support for dial-up and DSL internet customers.  
 Built custom web sites for web hosting customers using ColdFusion, HTML, and Javascript.

---

## FLOSS Projects

- django-celery-email** — Send emails async from Django using Celery
- django-redirect-urls** — Redirects for Django sites in code, not DB
- urlwait** — Waits for a service defined in a URL in the environment to become available
- dokku-webhook-deploy** — Use Dokku to auto-deploy branches pushed to Github

---

## Education

- University of Georgia, *Master of Internet Technology*** ..... 2001 - 2002  
 Intense masters program setup as a collaboration between the MIS and CS departments.
- University of Georgia, *Bachelor of Science - Cellular Biology*** ..... 1995 - 1999  
 Undergraduate work in genetics and developmental biology.
